Lithon Project
Consultants and IMCI+
have closed a strategic
partnership to deliver to
Engineering, Procurement
and Construction projects
a 360 degrees coverage,
including the financing of
projects from \$20 Million USD
up to \$100 Billion USD/Euro.

IMCI+ GROUP
INTERNATIONAL

SERVICES

STUDIES

Proper research and feasibility studies are fundamental to the success of any project. Our extensive services include needs analysis, pre-feasibility studies and bankable feasibility studies in various fields including infrastructure development, industrial, logistics, transportation and trade-off studies between various transport options especially in the mining sector, as well as commercial and residential development projects.

PROJECT MANAGEMENT

Lithon has vast experience and knowledge in the management of engineering projects. Our Project Management Office (PMO) diligently take care of our clients' needs to assist them.

TRANSPORTATION & AIRPORTS

Specialising in road, airport and rail infrastructure, our dynamic team expertly navigates the entire process from feasibility studies and planning to construction supervision and project management.

AGRICULTURAL ENGINEERING

Our passionate team strives to create and nurture environmentally sustainable agricultural developments by applying their combined experience across a full range of multi-disciplinary engineering skills. These include the technological disciplines of mechanical, civil, electrical, structural and chemical engineering with an in-depth knowledge of agricultural principles.

CIVIL ENGINEERING

Our comprehensive civil engineering services encompass all township and municipal requirements. Using state-of-the-art technology, our expert team develops sustainable and practical solutions to create spaces where people, communities and industries can thrive.

ELECTRICAL ENGINEERING

Our dynamic team can assist with any project requiring electrical systems study and design across all voltage levels, namely HV (High Voltage), MV (Medium Voltage) and LV (Low Voltage). Our expertise also extends to communication systems, security systems, process control and instrumentation.

MECHANICAL ENGINEERING

Lithon applies engineering, physics, engineering mathematics, thermodynamic and material science principles to provide our Clients with an optimised solution.

STRUCTURAL ENGINEERING

Lithon employs a highly skilled team of Structural Engineers and Technicians, with a successful track record in conceptualizing, designing, detailing and analysing innovative steel and concrete structures.

INDUSTRIAL ENGINEERING

Our industrial engineering solutions leverage mathematical and scientific problem-solving skills to address specific problems encountered by enterprises in any industry.

MINING ENGINEERING

Our team of experienced mining engineers and specialist sub-consultants provides a comprehensive range of cost-effective services from feasibility studies, exploration and evaluation through to full implementation of mining projects for both greenfield and brownfield projects. Our multi-disciplinary engineering offering includes all local on-site infrastructure and bulk off-site infrastructure for water, roads, rails, electricity and mechanical services.
